

## ***HSL Announce Launch of Web Service (SOAP / XML) Interface***

*Livingston, Scotland, 18<sup>th</sup> April 2005*

HSL (Hay Systems Limited), one of the leading providers of global mobile messaging services, are pleased to announce the introduction of the Web Service (SOAP / XML) interface for connection to their systems.

This new interface provides clients with an additional option in connecting to HSL. The Web Service interface offers easy integration with HSL's systems and can be deployed for use rapidly by the client. Detailed technical documentation and specifications for the Web Service interface can be found on the HSL website at <http://www.hslsms.com/infodocs-1.html>.

The Web Service interface is now available alongside the existing interface options of SMTP, HTTP and SMPP, and also alongside the recent additions of HSL solutions: EmailSMS, WebSMS and AlertBroadcast. This expanding mobile messaging portfolio increases the opportunities for clients to make the most of the reliable and resilient SMS Gateway provided by HSL.

For further information regarding this development or any other aspects of HSL and their services, please see <http://www.hslsms.com/>.
